RCFE New Staff Orientation Training Requirements - Medications

Facility Size	Hours	Training Details
All Facilities	2 Hours	Policies and Procedures Regarding Medications
15 or Less	10 Hours	Including Policies and Procedures Regarding Medications , 6 hours of medication training is required to be hands-on and the other 4 hours can be completed in any format.
16 or More	24 Hours	Including Policies and Procedures Regarding Medications , 16 hours of medication training is required to be hands-on and the other 8 hours can be completed in any format.

Medications training varies greatly depending on the size of the facility you work in. While our New Staff Orientation currently includes a total of 4 hours of medication training, this training includes required content on **Antipsychotic and Psychotropic Medication, Policies, and Procedures** to satisfy regulatory requirements.

For most facilities with 15 or fewer residents, these 4 hours coupled with 6 hours of hands-on training will be sufficient without any additional initial training.

For facilities with 16 or more residents, we currently recommend completing 20 hours of hands-on training along with our 4-hour component.
